

*Use iPhone / Android phone*

*To Record High Quality Audio For Your Videos*

WIRELESS

# Sounds Capture

→ Microphone  
→ Amplifier

• SC-100T  
Transmitter

The mobile phone is not so great for use as a microphone on a video camera. Because it's an omnidirectional microphone, it captures sound from all around and that makes it really hard to record good quality audio in a noisy environment. The background sound is just going to overwhelm the sound of person talking or music performance. Using the solution can go a long way to taking your video from being mediocre to marvelous.

Mobile phone or video recorder

Monitor headphone

• SC-100R  
Receiver
