Dial Peer Setting

Transfer SIP Message
 Yes No Replace contact to Dial Peer.

SIP Response when all busy.
 600 Busy Everywhere (default)
 408 Request Timeout

Dial Peer
Working Mode OFF Internal External
External URL (Dial Peer for XP)

Dial Peer Configuration Table corresponding IP
(please read next page)
***** If you have dial peer server, Sip
server/Asterisk set GSM route, please set Dial
Peer server's IP****

1. Transfer SIP Message

The Replace contact to dial peer: The default is OFF, which won't send the SIP message to corresponding port through Dial Peer. If ON, all SIP messages will send to corresponding port via Dial Peer.

2. SIP Response when all busy

Both 600 and 408 are SIP message, that user can select the corresponding response while all ports are busy.
The Default is 600

Dial Peer

Lan to mobile *,#: Dial peer software will look for available channel to dial out.

Dial Peer	
Working Mode	<input type="radio"/> OFF <input checked="" type="radio"/> Internal <input type="radio"/> External
External URL	<input type="text"/> (Dial Peer for XP)

Working Mode: OFF → To disable dial peer, so MV-378 will working under one IP and 8 ports

Internal → To motivate dial peer, so MV-378 will working under one IP and one Port.

Mode: calls will come to dial peer, and dial peer will route calls to idle channels.

E.g SIP Server sends call to MV-378 IP: 5060
when the first port is busy, MV-378 will use the second port to dial out...and so forth.

External → MV-378/MV-374 will be controlled by external dial peer program.

External URL → External dial peer program's IP address and port number.

Edit DialPeer.ini (External Dial Peer)

1. ID: The MV's Data ID
2. CH: The GSM channel of MV-37X
3. Cimi: The SIM Card ID
4. Lan: Show the outgoing Lan IP or Incoming Lan IP
5. Dir: The Arrow shows the route to be Lan to Mobile or Mobile to Lan
6. Mobile: The outgoing mobile number or incoming mobile number
7. tStart: When the call started(date and time)
8. tANS: The second answering the call
9. tEND: The second ending the call(duration)
(tANS, tEND are the exactly talking seconds)
10. State: The GSM Port Sate status

CDR Files store at C:\Program Files\DialPeer

The CDR log is stored in this “cdr” file each hour, which includes all gsm port call details record.

If there’s no calls in this hour, it won’t create any log.

CDR File

Example:

```
id=Mv-000000; ch=1; cimi=466922202956645; dir=L2M; iurl=192.168.0.96; omb=0980763178; tStart=4e7a0682(2011/09/21 15:45:06); tEnd=+26; state=LanEnd
```

1. Id=Mv-000000: The MV's Data ID
2. Ch=1: The 1st channel for MV ID
3. Cimi=466922202956645 : The SIM card ID for this GSM port
4. dir=L2M: The route is Lan to Mobile (If it's Mobile to Lan, that shows M2L)
5. iurl=192.168.0.96: The incoming IP
6. omb=0980763178: The outgoing number
7. tStart=4e7a0682(2011/09/21 15:45:06): The duration for the call
8. tEnd=+26: The call end on 26th second
9. state=LanEnd: The call hang up on Lan side.
